6 General requirements**6.1 Impact resistance****Requirements:**

Except as specified in Clause 6.1.3.2, the test for impact resistance shall be either the impact of a 6.00 ± 0.05 mm diameter steel ball travelling at a speed of 50.5 ± 0.5 m/s or a 6.35 ± 0.05 mm diameter steel ball travelling at a speed of 46.5 ± 0.5 m/s. The test shall be performed in accordance with Clause 12.2.2. No contact with either eye of the headform shall be permitted, nor shall any part become detached from the inner surface of the protector, nor shall the protector fail as defined below:

- a) lens failure: a lens shall be considered to have failed if it fractures through its entire thickness into two or more separate pieces, or if any lens material visible to normal or corrected-to-normal vision, including a laminar layer, if any, becomes detached from the ocular surface (see Annex F for exemplars); or
- b) housing failure: housing (such as a front, side shield, frame, body, lift-front, or lens holder) shall be considered to have failed if parts or fragments that could contact either eye of the headform are ejected from the protector.

The test results are showed as Table 1.
